**Daniel Marron, Ph.D.**

Scientist | Polymers & Chemistry  
Menlo Park  
+1 6506886783 | dmarron@exponent.com

## Professional Profile

Dr. Marron is a chemist with broad experience in leveraging analysis of molecular species to inform the mechanisms of macroscopic phenomena such as catalysis, material synthesis, degradation, and contamination. His analytical skills include high resolution mass spectrometry (HRMS), MS coupled to liquid and gas chromatography (LC-MS, GC-MS), and structural determination by X-ray diffraction (XRD). Additionally, he is proficient with nuclear magnetic resonance (NMR), Fourier transform infrared (FTIR), and UV-visible spectroscopies.

Before joining Exponent, Dr. Marron conducted his doctoral work at Stanford University. His primary research focused on developing new electrocatalytic methods for energy storage in liquid organic hydrogen carriers (LOHCs). In addition to the chemical characterization techniques above, this work made use of a variety of voltametric and amperometric electrochemical characterization techniques. Other projects during his doctoral work utilized air-free and low-temperature sampling techniques with HRMS to discover catalytic intermediates in a variety of reactions for fine chemical synthesis.

## Academic Credentials & Professional Honors

Ph.D., Chemistry, Stanford University, 2024

B.S., Chemistry, Virginia Polytechnic Institute and State Univ, 2018

B.S., Biochemistry, Virginia Polytechnic Institute and State Univ, 2018

Stanford Center for Molecular Analysis and Design Fellow, 2019-2021

Phi Beta Kappa, Virginia Tech, 2014

## Professional Affiliations

American Chemical Society

## Publications
