Engineering & Scientific Consulting

Jessica Vargas, Ph.D.

Office Director and Principal Scientist | Polymers & Chemistry
Phoenix
+1-650-688-7142 | jvargas@exponent.com

Professional Profile

Dr. Vargas is a chemist who specializes in compositional analysis of complex materials in support of product development, manufacturing, and root cause analyses, with an emphasis on materials for biomedical applications. She has diverse experience in the fields of polymer science, analytical chemistry, biochemistry, and drug and gene delivery.

Dr. Vargas has experience conducting chemical analysis to evaluate product compositions as well as assessing products for potential issues related to quality, contamination, stability, and biocompatibility. Her interdisciplinary training in chemistry and biochemistry enables her to support clients in applications related to pharmaceuticals, medical devices, wearables, food, cleaning products, cosmetics, and other consumer products. She has applied her expertise to matters related to materials selection, process development and process validation, extractable and leachable assessments, and product recalls.

Dr. Vargas is experienced in designing and validating non-standard methods for chemical evaluations, and she is skilled in the techniques utilized in organic synthesis and small molecule characterization, including NMR, FTIR, and UV-Vis spectroscopy, as well as chromatography and mass spectrometry methods such as GC-MS, HPLC, LC-MS, and MALDI-TOF. She also has practical knowledge characterizing polymeric materials and nanoparticles using size-exclusion chromatography (SEC), dynamic light scattering, and zeta potential measurements.

Dr. Vargas was a National Science Foundation Graduate Research Fellow in the Department of Chemistry at Stanford University, where she developed biodegradable block copolymers for small molecule and nucleic acid drug delivery, such as pDNA, siRNA, and mRNA. Her research leveraged organocatalytic polymerization techniques to synthesize functionalized polycarbonates and polyesters. She designed cellular and in vivo assays to measure the delivery efficiency and cytotoxicity of the resulting biomaterials using fluorescence microscopy, flow cytometry, and bioluminescent imaging. She also previously interned at W.L. Gore & Associates, where she developed and qualified analytical test methods used in coated stent manufacturing.

Academic Credentials & Professional Honors

Ph.D., Chemistry, Stanford University, 2017

M.A., Education, Loyola Marymount University, 2011

B.S., Biochemistry, Loyola Marymount University, 2010

Stanford Chemistry Safety in Teaching and Research Award, 2016

Stanford Chemistry Evelyn Laing McBain Award for significant research progress, 2016

National Science Foundation Graduate Research Fellow, 2012-2015

Scholar of the Year, Loyola Marymount University, 2010

Rhodes Scholarship Finalist, 2010

Exponent Diversity, Equity and Inclusion Advisory Committee Member

Academic Appointments

Lecturer, Department of Chemistry and Biochemistry, Loyola Marymount University, 2010-2011

Prior Experience

NSF Graduate Research Fellow, Department of Chemistry, Stanford University, 2011-2016

R&D Intern, W.L. Gore & Associates, Inc., Medical Products Division - Analytical Chemistry Lab, Summers 2008-2011

Professional Affiliations

American Chemical Society

Patents

U.S. Provisional Patent Appl. 62/376,555: Immolative Cell-penetrating Complexes for Nucleic Acid Delivery, July 2016 (Waymouth RM, Wender PA, Vargas JR, Blake TR, McKinlay CJ).
