

Exponent[®]
Engineering & Scientific Consulting

Liyu Wang, Ph.D., P.E.

Senior Engineer | Mechanical Engineering
Menlo Park
+1-650-688-7255 | lwang@exponent.com

Professional Profile

Dr. Wang is a licensed Professional Engineer, certified as a TensorFlow Developer and is a certified SolidWorks Mechanical Designer (CSWA). His specialties include artificial intelligence (AI) and machine learning (ML), robotics and control, engineering software development, relational database and time series data analytics and visualization, Computer-Aided Design (CAD), and dimensional and tolerance analysis. He applies these technologies in solutions for product safety, risk assessment, failure analysis, regulatory and compliance, financial forecast, predictive analytics, industrial automation, and new product introduction (NPI). He brings technical and business solutions to clients in consumer electronics, oil and gas, energy and utility, automotive and autonomous driving, industrial and manufacturing, medical devices, semiconductors, and beyond.

Dr. Wang's technical skills include software toolchains (Jira, Confluence, git, GitHub, pytest), programming languages (Python, R, C++, Matlab/Simulink, SQL, SPARQL), cloud computing services (Amazon Web Services AWS SageMaker, Bedrock, Google Colab, Earth Engine), data management and data operating systems (Palantir Foundry), electromechanical prototyping tools, sensors and actuators (DC, servo, stepper motors), microcontrollers (Arduino, mbed) and single-board microcomputers (Raspberry Pi), enterprise resource planning ERP software (SAP), customer relationship management CRM software (Salesforce), and business intelligence platform (Power BI).

Beyond technical skills, Dr. Wang has practical knowledge with sustainability frameworks and experience supporting clients with sustainability reporting activities, including adopting United Nations' Sustainable Development Goals (SDGs), Global Reporting Initiative (GRI) standards, and European Union (EU) Corporate Sustainability Reporting Directive (CSRD, 2022/2464/EU) and European Sustainability Reporting Standards (ESRS, 2023/2772/EU).

Prior to joining Exponent, Dr. Wang was a data science researcher at Siemens and developed fault diagnosis algorithms for intelligent car manufacturing by integrating physics engines, ontologies and semantic web, signal processing, and artificial intelligence.

As an investment data analyst at Runway Innovation, he used machine learning to predict companies' future revenue based on present innovation effort and helped Fortune Global 500 companies with their digital transformation innovation journey. He also performed technology due diligence and deal flow analysis for venture capital investors and asset management firms. For his work and expertise, he was named a finalist for The Technical Analyst Award.

During his postdoctoral research at UC Berkeley, he designed and developed an automatic robotic repair system while also performing fatigue testing on a folding-based hexapod robots using a treadmill and a motion capture system. Dr. Wang received a doctoral degree from ETH Zurich, where he developed both

climbing and pick-and-place robots constructed from thermoplastic adhesives. He performed mechanical testing for adhesive strength on various materials while developing and validating model-based control of deformation using thermal imaging and temperature sensors.

Academic Credentials & Professional Honors

Ph.D., Mechanical Engineering, ETH Zurich, Switzerland, 2014

M.Sc., Biomedical Engineering, University of Oxford, UK, 2007

B.Eng., Optoelectronics Engineering, Zhejiang University, China, 2006

The Technical Analyst Award Finalist, 2021

Siemens Fellowship, 2017

Haas Dean's Seed Fund, 2016

IET Travel Award, 2016

Swiss National Science Foundation Fellowships, 2014, 2016

Sloane Robinson Foundation Scholarship, 2007

Licenses and Certifications

Professional Engineer Mechanical, California, #41692

NVIDIA-Certified Associate: Generative AI LLMs

SOLIDWORKS Certificate in Mechanical Design

TensorFlow Developer

UL Certified Autonomy Safety Professional (UL-CASP)

Prior Experience

Investment Data Analyst and Innovation Consultant, Runway Innovation, 2020-2021

Data Science Researcher, Siemens, 2017-2018

Postdoctoral Researcher, University of California Berkeley, 2015-2019

Graduate Research Assistant, ETH Zurich, 2009-2014

Professional Affiliations

Institute of Electrical and Electronics Engineers (IEEE)

2023 Vice Chair, IEEE Robotics and Automation Society, Santa Clara Valley/Oakland-East Bay/San Francisco Joint Chapter

Member, IEEE P2940 Standard for Measuring Robot Agility Working Group

American Bar Association (ABA)

Project Experience

Risk Assessment, Risk Management, Risk Mitigation – Proactive

- Electric utility overhead transmission line wildfire risk assessment with development, testing, and documentation of a data analytics software in Python hosted in AWS and Palantir. Data analytics uses a combination of first-principle, statistical, and machine learning based models.
- Electric utility undergrounding distribution line construction program risk management with maintenance of a risk register and quarterly stakeholder engagements for risk update.
- Natural gas pipeline leak versus rupture failure mode prediction with development of a classification algorithm using machine learning models in Python.
- Natural gas pipeline asset integrity management, failure pressure and fatigue life estimation with development, testing, and documentation of a fracture mechanics software in R based on industry standards including API 579 / ASME FFS-1.

Product Safety – Proactive and Reactive

- Level 4 autonomous driving system (ADS) post-collision forensic analysis of subsystems including perception, localization and mapping, motion planning, and control, in response to requests from a US federal regulator (NHSTA) and a state regulator (CPUC).

- Consumer recreational product mechanical design evaluation with tolerance stack-up analysis according to the ASME Y14.5 GD&T standard.
- Review of American, European Union (EU), Chinese, and South Korean safety standards (e.g. UL 3100, IEC 62368-1) on information service robots for a consumer product.
- Tensile testing of an automotive service equipment according to ASME PASE-2019 standard.
- Peel testing and fatigue testing of consumer electronics battery packaging.

Regulatory and Compliance - Proactive

- Diesel engine products Auxiliary Emissions Control Device (AECD) and Auxiliary Emission Strategy (AES) disclosure regulatory compliance support with draft disclosure document review and revision, engine aftertreatment system control source code review in Matlab Simulink in compliance with U.S. 40 CFR Part 86, Subpart A and EU regulations EU 2017/1151, EU 2018/858, and EU 2023/443.
- Technical support for the U.S. Food and Drug Administration (FDA) approval of an in-vivo medical device, by providing test fixture design and fabrication, test setup and control (PLC controller), and fatigue testing with data acquisition systems (DAQ).
- Dimensional analysis of consumer AC power plug designs in compliance to International, EU, Korean, and Australian standards.
- Electric utility undergrounding distribution line construction program governance standards and procedures drafting, revision, and publication.

Predictive Analytics - Proactive

- Electric utility undergrounding distribution line construction cost forecast ML model development in Python, explanation and interpretation, continuous evaluation and monitoring.
- Physical impact prediction for passenger car advanced driver-assistance systems (ADAS) automatic emergency braking (AEB) feature high-speed testing termination with ML model development in Python, explanation and interpretation.

New Product Introduction - Proactive

- Mechanical design consulting for a semiconductor manufacturing equipment component using customized thermal testing setup, including test fixture mechanical design (Solidworks) and test setup control (PID control based on temperature sensors and PLC controllers).
- Simulated space launch acceleration testing for a consumer electronics product using customized setup, including test fixture mechanical design (Solidworks), 3D printing, and test setup control (Arduino microcontroller in C++).
- Quantitative user experience UX research and collection of high-fidelity human biometric, human behavior and environment data in the US and in Europe for a virtual reality (VR) / augmented reality (AR) consumer electronics product.
- Vibration damping ratio and loss function analysis for automotive Lidar sensor design by developing an estimation algorithm in Python.
- Review of American, Canadian, and EU standards (e.g. ISO 13482) on humanoid service robots for a consumer electronics product.
- Gap analysis of international standards for a consumer wearable product for health purposes.

Failure Analysis – Proactive and Reactive

- Aircraft engine failure analysis with dimensional analysis according to the ASME Y14.5 GD&T standard using PolyWorks.

- Robot vacuum cleaner debris ingress failure analysis with kinematics and dimensional analysis using Solidworks.
- Commercial aircraft paint categorical data analytics in Python.
- Offshore oil pipeline leak incident root cause analysis with sensor time series analytics and visualization in Python.
- Consumer electronics products failure analysis with alarm log event and time series data analytics and visualization in Python.
- Automotive compressor failure analysis with IP65 water and dust ingress testing according to IEC 60529 standard.
- Fault tree analysis for failures from bearings to autoparking systems.

Claim Disputes - Reactive

- Review of software architecture documentations and source code files for an automotive engine control unit (ECU) defeat device dispute case.
- Review of patents related to automatic control systems for an intellectual property dispute case.
- Automotive insurance claim dispute support with image meta data analysis in Python.

Additional Education & Training

AWS Cloud Technical Essentials, Amazon Web Services, November 2023

TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning, DeepLearning.AI, July 2022

GD&T and Stack-Up, Udemy, June 2022

Advanced CSRD Practitioner, Earth Academy, December 2024

Introduction to Foundry & AIP for Enterprise Organization, Palantir, February 2025

Planetary Scale Earth Observation with Google Earth Engine, Google Cloud, February 2025

Collaborative Robot Safety: Design & Deployment, SUNY Buffalo, February 2025

Introduction to CSRD and Reporting with ESRS, GRI, December 2024

ISO 26262 Functional Safety Mastery, Udemy, June 2024

Foundations of Project Management, Google, May 2023

Fusion 360, Autodesk, August 2021

SQL for Data Science, UC Davis, May 2021

Applied Data Science with Python, University of Michigan, June 2020

Management of Technology Innovation, UC Berkeley, May 2016
